DROPRNTTD		Drop Front tailgates on tandems	51

Cattle & Sheep Crates

Reasons why you should purchase one of our stock crates

- Frame Constructed from 3.2mm Thick, 1" Diameter pipe.
- Designed to avoid damage to stock.
- Top row of V-Panel has top edge folded.
- Undercoated and top coated as standard.

Highly Recommended options

- Divider has a heavy duty quick action slam catch.
- Divider can be located in two positions 1. The forward position, when not in use it can be fixed to the side of the crate, making it easy to carry without getting in the way. 2. In the Rear position the divider meets up with the open door making it easy to close after loading cattle or sheep.
- Removable Back - Save yourself the hassle of removing the crate every time you want to carry something more than 3 foot wide
- Drop Down Ramp - Perfect for unloading your stock in the paddock or a handy addition when you are caught without a race.

Part Number: 370000

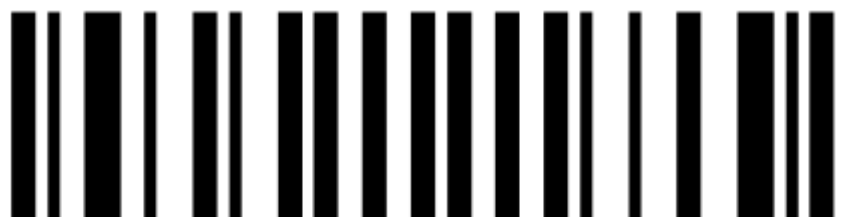

\$1,250 Unit Only
\$1,602 Fitted

**If ordered with
trailer special price
of \$1,500 fitted.**

The DSC continuously monitors trailer yaw (rotation on the vertical axis).

- ♦ It has a proprietary algorithm which is used to determine the difference between quick steering to avoid a road obstacle (or other such circumstances) and the rapid onset of a trailer swaying event.
- ♦ It measures the angle, travel distance and speed of the lateral motion of the trailer (and other parameters) and uses this information to quickly intervene with the application of trailer brakes.
- ♦ The processing capability of the DSC is powerful and rapid. It captures all the critical elements of the swaying condition and uses this information to predict how the event will proceed without any driver intervention.
- ♦ It uses this data to get ahead of the event by applying the brakes on the correct side of the trailer, in a timely manner, with the proper braking level for the required duration.
- ♦ This quickly dampens and brings the trailer sway under control.
- ♦ Dexter Sway Control is based on the same technology used in automotive vehicle stability systems.
- ♦ 2 Year Limited Warranty
- ♦ NOTE– Must be installed by registered installer
- ♦ All Day Install

370000

Trailer Mounted Brake Controller

Elecbreaks Bluetooth Electric Brake Controller

Part Number: ELBC2000-PS

\$670 Unit Only
\$758 hardwired to trailer.
\$700 if ordered with trailer.

Remote Control Kit

Part Number: EBR

\$180

Elecbreaks is a trailer mounted proportional trailer brake controller, wired directly into the trailers electrical circuit. Elecbreaks draws power from the taillight circuit as well as the brake light circuit ensuring sufficient power is available for up to 2 braked axles.

Braking is triggered by positive voltage being applied to the brake light circuit. Once braking is triggered Elecbreaks uses Microprocessors and Accelerometers to calculate and provide precise brake response

Elecbreaks employs a high-speed microprocessor and various sensors which continuously sample the operating parameters over 1,000 times per second

For communication, the device uses the widely adopted Bluetooth 4.0 standard, and the hardware selections yield a Bluetooth device that has long range capability ensuring high connection reliability and no dropouts under typical operating conditions. This ensures that the device can be mounted anywhere on the trailer's draw bar.

- * Proportional Braking
- * Multiple Programs
- * Device Stored settings
- * Urethane Resin encased Electronics
- * Water proof
- * Shock proof
- * Easy mounting
- * 2 Year Warranty

NOTE: Cradle Required
for Phone or Remote
